ForSale

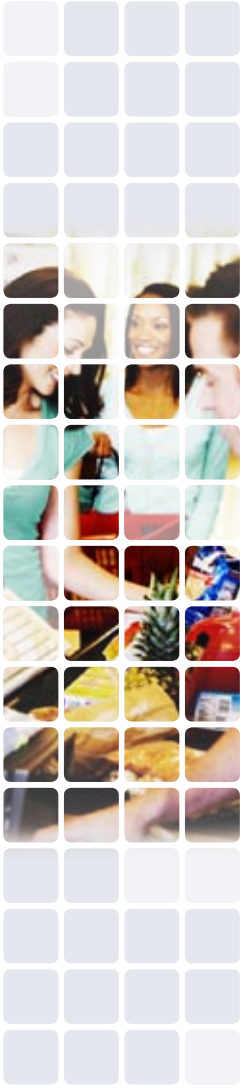

This solution offers real-time information, controls the whole sales and purchasing process, profit margins, product mix composition, customer service and cash flow, in addition to providing a profitable and efficient management.

By centralizing the information in a single central computer, it lets the user to track every transaction, thereby leveraging the increase of profits and allowing for access to the business information from any place in a practical and easy way.

The starting points in Teknisa's commitment to clients are freedom and incentive for innovation of their company's management. Our software solutions can fit into each company profile, according to its management method so as to ensure a broad control over its business.

The **easiest** way to ensure the **best results**

ForSale system handles three types of sale: checkout, table control and customer order control. This key difference makes it suitable for use in several retail and hospitality business such as bars, restaurants, night clubs, pizzerias, grill rooms, cafeterias, fast food, amongst others. Being enabled to the latest in commercial automation technologies like touch-screen and PDAs, **ForSale** provides greater agility in customer services and information security..

Being modular, it is basically composed by modules Point-of-Sales, Sales Management and Stock. Its key difference lies in the possibility of integrating with other **Teknisa** modules such as ExpressTech (Delivery), ERPs and Business Intelligence. This makes **ForSale** well-suited for companies of several sizes and profiles.

Its user interface displays icons, detailed options and data related to the services and products offered by an establishment. **ForSale** even allows for control of tables by environment, cover charge, special values according to the time of service, sales reporting, waitstaff commission, besides providing a broad control over product profitability and standardization of work processes. With the web technology, the user can keep all cash registers on-line and centralize their transactions in a single central computer so as to track sales and non-stop operations in real time, with scheduled updates
